

COLORPLUS®

COLORPLUS® is a double coat painted steel product for residential, small commercial and Industrial projects. It has been designed to offer the benefits of Aluminium – Zinc coating with the added aesthetics and superior solar reflection of top-quality color coating technology, bringing modern innovation to pre-painted steel roofing not to mention a range of colors that are as visually appealing as they are durable.

Colorplus® is available in standard coil widths of **925mm and 1220mm** and available from **28G** material to **20G**.

COLORPLUS® is available in the following standard colours:

Non-standard colours are available at the discretion of the mill, with minimum order quantities and extended lead times.

Texture Adds Character!

COLORPLUS TEXTURED® is a double-coat textured-finish paint system applied to a Zincol® substrate (Aluminium- Zinc coated sheet)

The textured surface provides a superior look, with a low gloss regardless of the angle from which it is observed. This ensures our textured finish is quite different from the conventional gloss finishes often used for manufacturing metal roofs, making it more visually attractive and increasing its appeal to architects and property developers. The brand offers an exciting alternative for roofing and cladding finishes. Architects and builders will be eager to exploit the obvious aesthetics and commercial potential of new textured products in increasingly demanding markets

COLORPLUS TEXTURED® is available in the following standard colors:

Non-standard colours are available at the discretion of the mill, with minimum order quantities and extended lead times.
